

FM BudMagic Solution

for opening tight flower buds

Enhance the opening of tight, fresh cut flower buds, to assist in targeting design dates. Common crop use is for roses, lilies, and carnations.

For Wholesalers, Bouquet Manufacturers, and Retail Florists

Features and Benefits

- Stimulates flower buds to open.
- Can use as a preconditioner with dry-pack shipments.
- Concentrated - 1 gallon makes 128 gallons of use solution.
- 1 gallon treats more than 10,000 buds.

Directions For Use

- Add 1 oz. (30 ml) of FM BudMagic solution to 1 gallon (3.87 L) of lukewarm water to prepare mix. Use of metal containers for flower storage is not recommended.
- Remove all the flower foliage and recut flower stems 1 – 2" with a clean knife or bunch cutter. Place the flower stems into the solution, allowing ample room for flower bud expansion as the buds start to open. Keep stem bunches untied. Leave flower buds in solution at room temperature for 1 – 3 days prior to designing arrangements.
- After buds open, keep refrigerated in Floralife® Crystal Clear® Flower Food solution until needed.
- Liquid lost through evaporation should be replaced with a new batch of fresh solution.

Read and follow label directions.

Available in 1 U.S. gallon (3.785 L) liquid containers.
